

## ABHISHEK KUMAR

Department of Environmental Conservation  
University of Massachusetts  
160 Holdsworth Way  
Amherst, MA 01003

Phone (Off): +1-706-715-9844  
Phone (Cell): +1-706-715-9844  
E-mail: [akumar1@umass.edu](mailto:akumar1@umass.edu)

### EDUCATION

- **August 2015 – May 2021**
  - University of Georgia (*Doctoral Degree*), Athens, Georgia, USA
  - Education Major(s): *Geography*
  - Dissertation Topic: An integrated approach to utilize multi-platform data for monitoring cyanobacterial harmful algal blooms in inland waters.
- **July 2014 – June 2015 (Continuation in UGA)**
  - National Institute of Technology, Rourkela (*Doctoral Degree*), Odisha, India
  - Education Major(s): *Earth and Atmospheric Sciences*
  - Dissertation Topic: Integrated approach of in-situ and satellite remote sensing for long-term monitoring of variability in water quality parameters of Chilika Lagoon, India.
- **August 2012 – June 2014**
  - National Institute of Technology, Rourkela (*Master's Degree*), Odisha, India
  - Education Major(s): *Mining Engineering*
  - Thesis Topic: Monitoring spatial and temporal variation of total suspended sediment in Chilika Lagoon using MODIS/Terra satellite imagery.
- **September 2008-July 2012**
  - NM Institute of Engineering & Technology, Bhubaneswar (*Bachelor's Degree*), Odisha, India
  - Education Major(s): *Electronics & Communication Engineering*
  - Project Topic: Camera based interactive wall display.

### RESEARCH INTERESTS

- Application of remote sensing (field, satellite, unmanned aerial vehicle, radar) and geospatial science in water resources, mangrove forests, vegetation, and climate change studies.
- Empirical, semi-analytical, quasi-analytical modelling and algorithm development.
- Short-term and long-term impact assessment of natural hazards (hurricanes, wildfires) on inland and coastal environments.

### RESEARCH SKILLS

- Satellite Image Processing (SNAP, SeaDAS, ERDAS IMAGINE, ENVI, Google Earth Engine, ArcMap)
- Satellite Image Analysis and Modeling
- Programming (C, C++, MATLAB, Python)
- Statistical Analysis (Microsoft Excel, JMP Pro, Python)
- Field Remote Sensing (Handheld Spectroradiometers: SVC-GER1500, SVC-HR1024i)
- Grant proposal write-up and review

### PEER REVIEWED PUBLICATIONS

#### BOOK CHAPTER

- **Kumar, A.**, D. R. Mishra, and Sk. Md. Equeenuddin. 2019. Long-Term Analysis of Water Quality in Chilika Lagoon and Application of Bio-optical Models for Cyclone Impact Assessment. In: C. Max Finlayson, G. Rastogi, M. Suar, D. R. Mishra, and A. Pattnaik (eds.) Ecology, Conservation, and Restoration of Chilika Lagoon, India, **Springer**, Switzerland (<https://www.springer.com/gp/book/9783030334239>).

## RESEARCH EXPERIENCE

- **(June 2021- Present) Post-Doctoral Research: Rethinking lake management for invasive plants under future climate: Sensitivity of lake ecosystems to winter water level drawdowns:** This project is funded by Climate Adaptation Science Center (CASC). The project uses remote sensing data, validated with on-the-ground water level and cyanobacteria data collected by partner organizations and citizen scientists, to identify winter drawdown lakes and prevalence of cyanobacteria blooms throughout the Northeast and Upper Midwest US. In addition, project will use continuous hydrologic data from a subset of drawdown lakes to build a hydrologic model to examine sensitivity of lake drawdowns and vulnerability of cyanobacteria blooms to future climate and precipitation. My role in this project is to work directly with state and federal partners to compile existing hydrology and cyanobacteria data, process and analyze remote sensing data (along with PhD student), draft annual reports, lead quarterly meetings with partners, conduct cross-region webinars and regional workshops to share models and solicit feedback.
- **(August 2015 – May 2021) Ph.D. Dissertation: An Integrated Approach to Utilize Multi-platform Data for Monitoring Cyanobacterial Harmful Algal Blooms in Inland and Coastal Waters:** My dissertation was focused on the use of in-situ data and multiple new and past satellite sensors towards developing remote sensing models for detection, quantification, and monitoring of Cyanobacterial Harmful Algal Blooms (CyanoHABs) in inland lakes and Coastal Lagoons. I used multispectral satellite data (ENVISAT- MERIS, Sentinel 3-OLCI, Sentinel 2-MSI, Landsat 8-OLI) and in-situ remote sensing data for modeling purposes. For model calibration and validation, I used in-situ cyanobacteria cell counts, phycocyanin concentration, chlorophyll-a concentration and near simultaneous in-situ reflectance and satellite derived reflectance data. My research demonstrated solutions for spatial, temporal, spectral, and radiometric resolution limitations associated with use of a single satellite sensor through cross-calibration and synchronous use of multiple satellite data, fill the data gap, and focus on product continuity instead of sensor dependency. The results and products from this study will help in accurate, inexpensive, and rapid quantification and monitoring of CyanoHABs by identifying their occurrence, extent, intensity, and duration, which is needed for issuing public health alerts in advance and minimizing their negative economic and environmental impacts by timely informing the water resource managers.
- **(May 2019 – June 2021) A cloud-based approach for continuous monitoring of cyanobacterial harmful algal blooms using Sentinel 3-OLCI data:** This was a collaborative work with a visiting student intern from India to create a Google Earth Engine dashboard for near real time detection and monitoring of cyanobacteria bloom in inland and coastal waters across globe using Sentinel 3-OLCI data. I presented this work at “ASPRS-PECORA21:ISRE38” conference in Baltimore, USA. This work is submitted to “*Harmful Algae*” journal and currently under review.
- **(August 2015 - Present) “CyanoTRACKER” a National Science Foundation Project:** This is a multi- cloud framework to integrate community observations and remote sensing measurements for early detection of cyanobacterial harmful algal blooms in inland waterbodies of Georgia, USA (now worldwide). My responsibility in this project is to process and analyze the remote sensing data for cyanobacterial harmful algal bloom detection, quantification, and monitoring. I also maintain CyanoTRACKER social media platforms (Twitter and Facebook) and share satellite derived maps in near real time. I presented this work at “AAG-2019 Conference” in Washington D.C. and won the best student paper presentation award. Recently, we published our five years of work under this project in “*Harmful Algae*” journal.
- **(July 2020 - May 2021) COVID-19 Anthropause impact on coastal waters of Georgia:** This is a part of collaborative work between group of people from Long Term Ecological Research (LTER) to evaluate impacts of pause in anthropogenic activities in coastal environments during COVID-19 lockdown. I worked on producing satellite based NO<sub>2</sub> maps for entire United States and Spatio-temporal maps of colored dissolved organic matter along Georgia Coast. The work is ready for submission to “*Ecosphere*” journal.
- **(May 2020 – July 2020) COVID-19 lockdown impact assessment on coastal waters of India:** This was a collaborative work with researchers from Indian universities and management agencies to evaluate impacts of COVID-19 lockdown on nutrients load and phytoplankton productivity along coastal waters of India. I produced satellite based total suspended sediments and chlorophyll-a maps for

entire Indian coast and also generated long-term time series of precipitation and surface runoff for entire India. This work was published in “*Remote Sensing*” journal.

- **(August 2019-September 2020) Comparative study of impacts of seasonal hurricanes on water quality of Asia’s largest brackish water lagoon:** This is a collaborative work with researchers from Indian universities and management authorities of Chilika Lagoon, India. Under this project, I created satellite-based models to prepare spatio-temporal maps of total suspended sediments, chlorophyll-a, and water transparency. I also created time-series of precipitation and surface runoff to isolate hurricanes impacts. This work was recently published in “*Science of the Total Environment*” journal.
- **(January 2019 – December 2019) Landsat 8 virtual orange band for cyanobacteria bloom study in Lake Erie:** This work was related to my dissertation chapters in which I utilized a novel Landsat 8-OLI virtual orange band (which is used for cyanobacteria bloom detection and quantification) to calibrate remote sensing models and prepare spatio-temporal maps of phycocyanin (a cyanobacteria pigment) concentration in Lake Erie. I also compared the results of Landsat 8-OLI and Sentinel 3-OLCI derived phycocyanin maps. This work was published in “*Remote Sensing*” journal.
- **(June 2018 - August 2018) Persistent hydrological consequences of Hurricane Maria in Puerto Rico:** This project was part of my research assistantship at University of Georgia during Summer-2018. I extracted pre-and post-Hurricane magnitude and extent data from various MODIS biophysical products including Gross Primary Productivity (GPP), Leaf Area Index (LAI), and NDVI. Also, I produced Sentinel 3-OLCI based total suspended sediment maps pre-and post-Hurricane Maria and extracted data for comparison. This work was published in “*Geophysical Research Letters*” journal.
- **(August 2017 – June 2018) A multi-sensor approach for monitoring cyanobacterial harmful algal blooms along freshwater-marine continuum:** This was a collaborative work with one of my lab-mate in which we captured the spatio-temporal variability of cyanobacteria bloom in Lake Okeechobee and St. Lucie River Estuary, Florida using Landsat 8 and sentinel 2 satellite data. I presented this work at “*Ocean Optics XXIV Conference*” in Dubrovnik, Croatia.
- **(September 2017 - November 2017) NASA DEVELOP Project** to assess Sea level rise and develop optimal green infrastructure plans to restore mangrove habitat and enhance coastal resiliency: As a team member, I analyzed 30 years of Landsat data to quantify mangrove spatial extent near Miami Beach and isolate the impacts of severe weather events such as Hurricanes. I presented this work at “*AGU-2017 Conference*” (under selected topics for live telecast worldwide) in New Orleans, USA.
- **(June 2017 – August 2017) NASA DEVELOP Project** to forecast mangrove biophysical parameters and land cover change in Bhitarkanika along east-coast of India. I was the team lead of this project where I utilized long-term (20 years) time-series data of mangroves biophysical parameters (GPP, LAI, Chl-a), rainfall, and temperature data to forecast the mangrove biophysical parameters up to year 2050. I also guided my team members to forecast landcover change in the study site for 2050 using IPCC projected climate data. This work was published in “*International Journal of Applied Earth Observation & Geoinformation*” journal.
- **(June 2017-July 2017) Ocean Optics Project** at Darlington Marine Center, University of Maine, Maine: I was selected among one of the 20 students worldwide to receive an intensive one-month ocean color remote sensing training funded by NASA. During this training I worked on a collaborative project with other two members in my team to utilize multi-platform data to derive inherent and apparent optical properties in Oligo-to-Mesotrophic waters. I presented this work at “*Ocean Sciences Meeting-2018*” in Portland, Oregon.
- **(January 2017 - March 2017) NASA DEVELOP Project** to study the long-term trend in mangroves biophysical parameters and land-cover change along east-coast of India. I was the team lead of this project where I extracted long-term (20 years) data on mangroves biophysical parameters including Gross Primary Productivity, Leaf Area Index, Chlorophyll-a, and Evapotranspiration from Terra/MODIS based biophysical models developed in the previous term of this project. I also guided team members in landcover classification and change detection. I presented this work at “*AGU-2017 Conference*” in New Orleans, USA.

- **(September 2016 – November 2017) NASA DEVELOP Project** to develop multi-sensor biophysical models for Bhitarkanika and Chilika mangrove forests along east-coast of India. I was the team lead for this project and developed mangroves gross primary productivity, leaf area index, and chlorophyll-a models using Terra/MODIS and Landsat 8-OLI surface reflectance data. I performed cross-calibration between MODIS and OLI derived vegetation index to derive consistent products from both sensors. This work was published in *“Proceedings of the National Academy of Sciences”* journal.
- **(June 2016 – August 2016) NASA DEVELOP Project** to utilize satellite and proximal remote sensing for mapping the spatio-temporal distribution of hydrilla (a submerged aquatic vegetation) in southeast United States. I was the only team member with remote sensing expertise on this project and lead the team to successful completion of this project. I created Landsat 8-OLI based light attenuation model and integrated it with bathymetry data to detect and map hydrilla in Lake Thurmond, Georgia-South Carolina. I lead this work to publication in *“Weed Technology”* journal. I also provided output from this project to **NASA Earth Observatory** team to prepare image of the day map.
- **(August 2015 – June 2016) Differential Impacts of anniversary severe cyclones on a tropical coastal lagoon:** This research at University of Georgia was extension of my previous master’s thesis work on water quality of Chilika Lagoon. I analyzed differences in impacts of two severe cyclones (Phailin and Hudhud) which made landfall on same date but one year apart near Chilika. I used Terra/MODIS based total suspended sediment and chlorophyll-a models to prepare spatio-temporal maps pre-and post-cyclones. Also, I used NASA Giovanni web tool to extract precipitation and surface runoff data for watershed to evaluate differential impacts of two cyclones. I went to India to present this work at meteorological conference **“TROPMET-2016”** where I won the best poster presentation award. Later, this work was published in *“Estuaries and Coasts”* journal.
- **(June 2013 -July 2015) Long-term spatio-temporal variability of suspended sediment in Chilika using Terra/MODIS:** This research was part of my master’s thesis work. I developed Terra/MODIS-based total suspended sediment (TSS) model for Chilika Lagoon using multi-year in-situ data. The model was validated in USA, Brazil, and China water bodies as well before creating a long-term (14 years) spatio-temporal maps of TSS in Chilika to capture seasonal and interannual variability and isolating severe weather impacts such as cyclones. I also used NASA Giovanni web-interface to download precipitation, surface runoff, and wind data. I presented this work at **“ISPRS TC VIII Conference-2014”** in Hyderabad, India. Later, this work was published in *“Estuarine Coastal and Shelf Science”* journal.

#### CONFERENCE PRESENTATIONS/POSTER

- Maniyar, C., **Kumar, A.** and D. R. Mishra. 2020. Web-based Interactive Approach for Continuous Monitoring of Indian Inland and Estuarine Waterbodies for Harmful Algal Blooms. **National Symposium on Remote Sensing for Environment Monitoring and Climate Change Assessment: Opportunities and Challenges**, Indian Society of Remote Sensing (ISRS) and Indian Society of Geomatics (ISG), Virtual, December 2020.
- **Kumar, A.** and D. R. Mishra. 2020. COVID-19 Lockdown affected nutrient load and phytoplankton production in Indian Coastal Waters. **Marine Sciences Student Research Symposium-2020** (Zoom presentation), University of Georgia, Athens, GA, USA.
- **Kumar, A.** and D.R. Mishra. 2019. A multi-sensor approach for monitoring cyanobacterial harmful algal blooms in a large subtropical lake. **Coastal and Estuarine Research Federation (CERF)-2019**, November 03-07, 2019, Mobile, Alabama, USA.
- **Kumar, A.,** C. Maniyar, and D.R. Mishra. 2019. A cloud-based approach for continuous monitoring of cyanobacterial harmful algal blooms using Sentinel 3-OLCI data. **ASPRS-PECORA21:ISRE38**, October 06-11, 2019, Baltimore, Maryland, USA.
- Mishra D., **A. Kumar,** G. Rastogi, and S. Narulmalani. 2019. A multi-sensor technique for monitoring cyanobacterial harmful algal blooms in freshwater lake and brackish water lagoon. **IEEE Geoscience and Remote Sensing Society (IGARSS)**, July 28-August 2, 2019, Yokohama, Japan.
- **Kumar A.,** Mishra, D.R., L. Ramaswamy, and V. K. Boddula. 2019. CyanoTRACKER: A multi-cloud cyber infrastructure for monitoring global proliferation of cyanobacterial harmful algal blooms. **AAG Annual Meeting**, April 3-7, 2019, Washington, DC.
- **Kumar, A.,** D.R. Mishra, and B. Page. 2018. Adapting current state of art: A multi-sensor approach for monitoring cyanobacterial harmful algal blooms along freshwater-marine continuum. **Ocean Optics XXIV**, October 7-12, 2018, Dubrovnik, Croatia.

- **Kumar, A.,** S. Equeenuddin, D.R. Mishra, and B.C. Acharya. 2014. Variability of total suspended sediment in Chilika Lake during Phailin using MODIS/Terra. **ISPRS TC VIII Mid-Term Symposium** on “Operational Remote Sensing Applications: Opportunities, Progress and Challenges” 9-12 December, 2014-Hyderabad, India.

#### AWARDS & SCHOLARSHIPS/FELLOWSHIPS

- Outstanding teaching assistant award-2021 (Recognition Award): University of Georgia, USA
- Best-paper presentation award-2020 (Recognition Award): ISRS and ISG, India
- Summer Doctoral Research Fellowship-2019 (\$3500): University of Georgia
- AAG-2019 RSSG Student Illustrated Paper award (1st Place) (\$300): AAG-2019, Washington, DC.
- Foreign travel assistance award (\$1200): Ocean Optics conference-2018, Dubrovnik, Croatia.
- Early career scientist travel award (\$500): Ocean Sciences Meeting-2018, Portland, Oregon.
- Selected among 20 students worldwide for Ocean Optics training (Summer-2017), funded by NASA.
- DEVELOPErs of the term (Recognition Award): NASA DEVELOP (Fall-2017) among 102 participants.
- AGU Fall-2017 conference travel award (\$1400): NASA DEVELOP National Program.
- AAG-2017 conference travel award (\$1700): NASA DEVELOP National Program.
- Best Poster Presentation Award (Recognition Award): National Symposium on Tropical Meteorology: Climate Change and Coastal Vulnerability. Bhubaneswar, Odisha, India, December 18-21, 2016.
- Graduate Research Fellowship, Department of Earth and Atmospheric Sciences, National Institute of Technology Rourkela, India (2014).
- Institute Silver Medal (Recognition Award) for being Topper of Master’s batch (2012-14), National Institute of Technology Rourkela, India (2014).
- Graduate Research Fellowship, Department of Mining Engineering, National Institute of Technology Rourkela, India (2012).

#### ACADEMIC/PROFESSIONAL POSITIONS

- Postdoctoral Research Associate, Department of Environmental Conservation, University of Massachusetts, Amherst, (June 2021-present)
- Teaching Assistant, Department of Geography, UGA (August 2018 - May 2021)
- Research Assistant, Department of Geography, UGA (August 2015 - May 2021).
- Project Lead, *University of Georgia, CyanoTRACKER*: NSF project.
- Project Lead, Eastern India Ecological Forecasting Group III, NASA Develop National Program, *University of Georgia* (June 2017 – August 2017).
- Project Lead, Eastern India Ecological Forecasting Group II, NASA Develop National Program, *University of Georgia* (January 2017 – March 2017).
- Project Lead, Eastern India Ecological Forecasting Group I, NASA Develop National Program, *University of Georgia* (August 2016 – November 2016).
- Member Consultant, Southeast US Ecological Forecasting Group III, NASA Develop National Program, *University of Georgia* (June 2016 – August 2016).

- Research Assistant, Department of Earth and Atmospheric Sciences, *National Institute of Technology Rourkela*, Rourkela, India (July 2014 – June 2015).

#### OCCASIONAL REVIEWER FOR PEER REVIEWED JOURNALS

- Remote Sensing
  - Water Research
  - International Journal of Remote Sensing
  - Agricultural and Forest Meteorology
  - Drones
  - ISPRS Journal of Photogrammetry and Remote Sensing
  - Remote Sensing Letters
  - Water Science and Engineering
  - Journal of the American Water Resources Association
- Reviewer profile page link (<https://publons.com/researcher/1316047/abhishek-kumar/peer-review/>).

#### RESEARCH GRANT PROPOSAL CONTRIBUTION

- Georgia Water Resources Institute (GWRI) (\$55,299) (03/01/2019 – 02/29/2020): Developing an effective and targeted monitoring system for tracking harmful algal blooms across Georgia (Role: Assisted in writing the proposal).
- NASA DEVELOP (09/12/2016-04/01/2017): A multi-sensor approach to enhance the prediction of mangrove biophysical characteristics in Chilika Lagoon and Bhitarkanika Wildlife Sanctuary, Odisha, India (Role: Assisted in writing the proposal).
- Ohio Water Resources Center (OWRC) (November, 2020): National Institutes for Water Resources (NIWR) State Water Resources Research Institute 104 (b) Grant Program (Role: Proposal Reviewer)

#### COURSES TAUGHT (TEACHING ASSISTANT/ INSTRUCTOR)

- Remote Sensing of Environment (GEOG4350/6350)
- Field Remote Sensing (GEOG4460/6460)
- Digital Image Analysis (GEOG4450/6450)
- Introduction to Landform Lab (GEOG1113L)

#### GUIDED STUDENTS (UNDERGRADUATE/GRADUATE THESIS)

- Chintan Maniyar (Graduate Student, Indian Institute of Remote Sensing, ISRO, India)
- Elif Kiyak (Graduate Student from Turkey)
- James Lewis Talkin (Undergraduate Student, University of Georgia)

#### OTHER ACTIVITIES

- Participated in organizing a workshop for creating awareness about harmful algae bloom at Oconee County High School, Watkinsville, Athens, Georgia (September-2016).
- Provided satellite image processing training to NASA DEVELOP participants.
- Provided satellite image processing training to students from Creighton University.
- Volunteered flood mapping using satellite data for Cloud to Street Company.

#### NEWS ARTICLES & MEDIA HIGHLIGHTS

- Provided materials related to Cyanobacterial Harmful Algal Blooms to NASA Landsat Science team to prepare special issue article (<https://landsat.gsfc.nasa.gov/satellites-on-toxic-algae-patrol/>).
- Provided materials to NASA Earth Observatory team to prepare image of the day map for

hydrilla (<https://earthobservatory.nasa.gov/images/89385/mapping-a-tenacious-invader-in-lake-thurmond>).

- Provided satellite map to prepare CyanoTRACKER news article (<https://news.uga.edu/new-system-detects-toxic-algae/>).
